The Southeast Kiko Goat Association is an independent goat association whose goal is to promote and make known the benefits of raising Kiko Goats.

Whether you are looking to upgrade your current herd, or start a new flock, Kiko is the goat for you.

The Southeast Kiko Goat Association serves breeders all across the US.

Membership is possible for Kiko breeders from any and all states.

WORKING TOGETHER TO FEED AMERICA

WHAT IS SUNN HEMP

Sunn Hemp, a tropical legume, has the reputation of being one of the best soil-building cover crops in the world. It also has the reputation of being one of the best summer forages in the world for goats. Goats thrive on this forage. This plant grows very fast and typically reaches 6 feet in height in 60 days. It also is a legume so

it replenishes the soil with Nitrogen. Within 60 days it typically replenishes the soil with over 100 pounds of Nitrogen and translocates from the subsoil 10 pounds of Phosphorus and 80 pounds of Potash per acre. It also adds 4 tons of organic matter and suppresses both Root Knot and Reiniform nematodes in the soil.

WHY GOATS THRIVE ON SUNN HEMP

First of all, the leaves of the plant are over 30% Nitrogen. This boost in protein results in phenomenal herd health. At present there are no known toxins in sunn hemp that reduce parasites in goats. However, the fact that the goats will be mostly upward browsing is another dynamic effect on the herd as they will be ingesting few, if no, worm eggs. It is very important to let the sunn hemp achieve at least 32 inches, preferably 40 inches, in height before allowing the goats to graze. This typically will be around 45 days after planting. This allows time for the main stem to become a bit steamy

and then the goats will eat just the leaves. If the stems are mowed below 12 inches the sunn hemp may die instead of producing fast regrowth. If the sunn hemp is too tall, 6 feet or more, the goats may walk the plant down to eat the leaves and this usually kills the plants. So control graising is a must if you only have a small patch of sunn hemp. Allowing the herd to graze for one hour per day is ample. If unable to control graze ever day, allowing the herd to graze at least once every four days will produce dynamic herd health. Seeding rate: 15lb/per acre.

WHERE TO BUY SUNN HEMP
